

## Nucleotide Conservations of Basepairs (X:Y) in the 5S rRNA

### 1. Nucleotide Conservations for All 5S Basepairs:

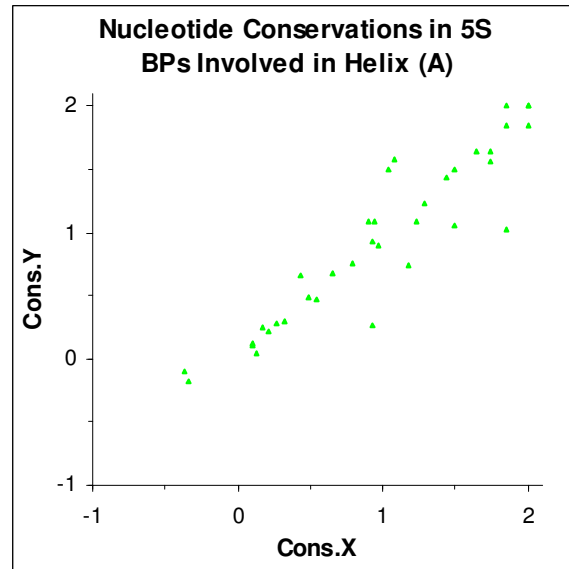

Legend: BPs = Basepairs; BPCs = Basepair Conformations; 3P+2O = the three phylogenetic domains and two organelles; A = Archaeal domain; Cons.X = Conservation of Nucleotide X; Cons.Y = Conservation of Nucleotide Y.

2. Nucleotide Conservations for 5S Basepairs with Canonical Conformations:

3. Nucleotide Conservations for 5S Basepairs Involved in Helix:

Legend: BPs = Basepairs; BPCs = Basepair Conformations; 3P+2O = the three phylogenetic domains and two organelles; A = Archaeal domain; Cons.X = Conservation of Nucleotide X; Cons.Y = Conservation of Nucleotide Y.
